Fluid

Andrew Charteris
Test Analyst

Summary

Andrew specialises in IFS, he delivered the Situation Integration Testing and User Acceptance Testing for Bettys and Taylors Fusion project in charge of finance, manufacturing, and the bakery testing portfolio. Andrew has been testing for two years and an IT consultant for five. His testing experience includes integrations, reports, custom developed items and dashboards specifically in IFS ERP systems and snap logic. Testing is often thought of last in the software development lifecycle but once it's communicated, shown and validated it quickly becomes a core principle to ensure the quality of the project deliverables is reached, maintained and communicated to the stakeholders. With testing the ability to understand the work and explain it in plain English is paramount.

Approach

Andrew loves to know how things work. He's passionate about finding root causes of issues, providing possible solutions and then validating the solution to deliver a more holistic service than 'test and pass on'. His drive comes from delivering quality work to his business colleagues and he's proud of his reputation as a trusted advisor and an integral part of the team.
